

The ONCOblot® Test

- One blood test
- All major forms of cancer
- Earliest stages of detection

"Early detection is the key."

How many times have you heard experts say that early detection is the key to beating cancer? At ONCOblot® Labs, we not only agree, we've created a test that will allow us to detect cancer cells earlier than ever.

A New Blood Test for Early Detection

The ONCOblot® Test is a highly sensitive blood test that detects cancer in early development, even before clinical symptoms appear. This knowledge empowers physicians and their patients with an insight that has previously been hidden until later stages.

One Test • Multiple Purposes

The ONCOblot® Test is a valuable tool in early diagnosis and early treatment

- Screen for origin of cancer
- Screen for recurrence of cancer
- Screen for familial cancer
- Screen after cancer treatments

One Test Reveals All Major Forms of Cancer

The ONCOblot® Test does the work of many tests in one. Whereas most tests available today are specific to one or a few types of cancer, the ONCOblot® Test detects over 25 forms of cancer including: Large and small cell lung, Breast, Prostate, Colon, Malignant melanoma, Lymphoma/Leukemia, Pancreatic, Ovarian, Cervical.
